

Custom Tensioning Tool for Pump Casing Bolts

Pump casings often require something special when it comes to tightening the bolts.

For one customer Boltight used a largely conventional and standard tensioning tool with a customised bridge to enable the pump casing to be bolt tensioned at minimal cost.

2-1/4 inch Custom Hydraulic Bolt Tensioning

This 2-1/4 inch tool operates at 1000 bar to keep the cost of the flexible hoses and pump to a minimum. The tool develops a residual load of 515 kN in each of the fourteen bolts securing the casing.

Boltight designs and manufactures a wide range of hydraulic bolt tensioning equipment. Whether you need a simple low cost tool or a special custom built design Boltight engineers have over 30 years experience and are ready to respond to your call.
