

Managed Service Contract

Boltight offers the option of taking out a fully managed service contract to cover regular servicing work on Boltight's and third party hydraulic bolt tensioners, hydraulic nuts, hydraulic pumps, hoses and ancillary equipment.

Annual service

A regular service is the best way to ensure that equipment is fit-for-purpose and always stays in perfect working condition. We recommend hydraulic bolt tensioners are serviced annually or after a period of heavy use following a major project or outage.

Our turnkey managed service contract option includes collection and delivery to the customer's preferred location with servicing carried out to a pre-agreed price.

If required, Boltight will repair and upgrade equipment to incorporate the latest advanced technology. This might include replacing components, piston seals, the recalibration of pump pressure gauges and pressure testing.

Pressure Equipment Management Service

Our Pressure Equipment Management Service (PEMS) typically forms part of a managed service contract. PEMS ensures all pressure equipment is fully maintained, controlled, pressure tested, calibrated and safe to use at all times in compliance with the Pressure Safety Systems Regulations 2000 and the European Pressure Directive.

Equipment is maintained through a 6-step program which includes inspection, pressure testing, callibration and certification. We manage the entire process through our PEMS database and create a long term examination scheme detailing the required test procedure and the required pressure test and examination frequency.

Inventory is either repaired or replaced as required to deliver the most cost-effective solution. Full reports and updates can be accessed through PEMS to ensure complete transparency at every stage.

All makes of bolt tensioners

Any type or make of bolt tensioning equipment can be covered by a managed service contract, not just Boltight's own range of tools.

Simpler administration

Customers are reminded when tools need to be returned for inspection and routine maintenance. We arrange for the tools to be collected.

Storage options

If required, customers also have the option to store tools at Boltight in the knowledge that they will always be serviced, available and ready to use at short notice.

Trust

Customers trust Boltight to manage their servicing requirements to exacting quality standards. All work is carried out in a dedicated workshop at the company's manufacturing facility in the UK.

Benefits of a managed service contract

- Annual servicing at pre-agreed price
- All makes and types of hydraulic bolt tensioners and ancillary equipment covered
- Systematic upgrades to latest technology
- Certification included in contract
- Less administration and record keeping
- More cost effective and time efficient
- Tools always safe to use and fit-for-purpose
- Storage options available
- Fast turnaround on tight deadlines
- Collection and delivery arranged
