

Twin Hydraulic Connection with Swivel

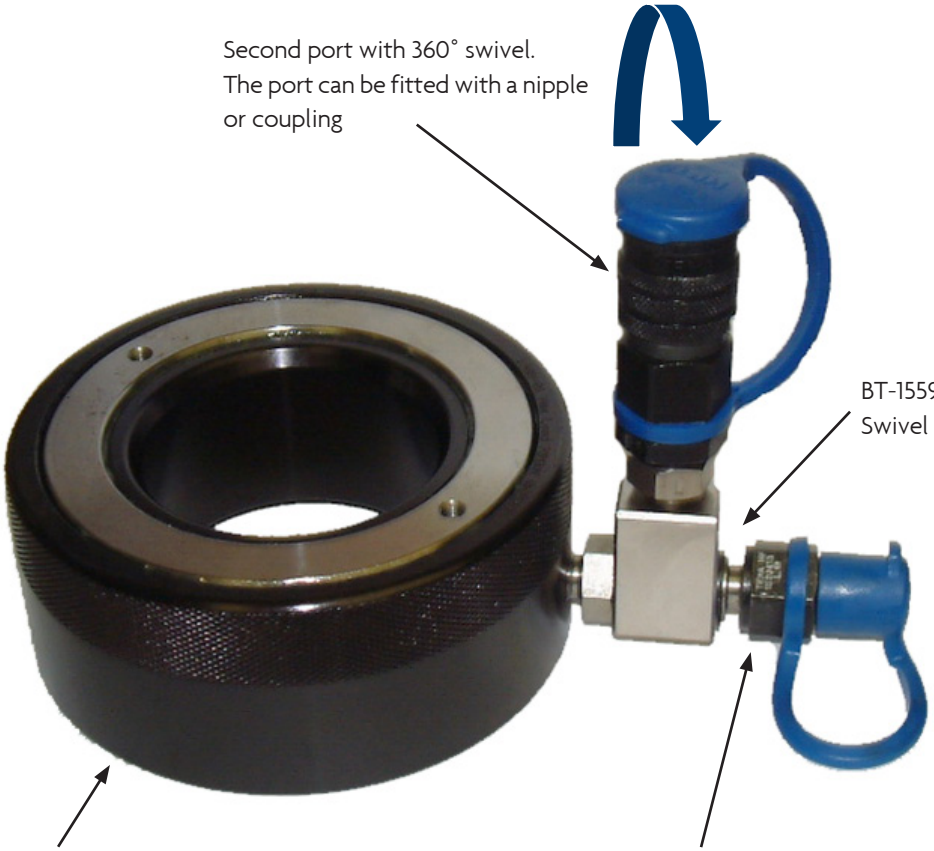

This 1500 bar swivel adaptor easily converts a single port tool into a twin port tool without the need to machine a second port in the cylinder.

As a bonus the extra port swivels through 360° (even when pressurised) allowing much easier connection of the hoses.

With conventional twin port cylinders it can be difficult to connect the hoses when the tools are close to each other. To make the connection, hoses are sometimes forced into a tight bend radius risking hose damage or failure when pressurised.

Using the swivelling second port, the hose is easily fitted to adjacent tools without exceeding the minimum bend radius of the hose. This ensures fast, easy and safe use of the tools and hoses.
