

Training - Theory & Practical

Learning Best Practice for Boltight Turbine Equipment

Boltight provide on-site training for equipment operatives immediately prior outages. The training includes modules on safety, theory of bolting and the applications, and practical training on the turbine. Up to eight operatives can be accommodated on the training course. By using the equipment straightaway after training helps to generate competence and enthusiasm which is efficient, effective and risk averse.

The training schedule is a 2 day event for each of the product offerings. However, if two or more of the product offerings require training modules, this can be covered within a 3 day schedule.

At the conclusion of the training, there is a summary, followed by a question and answer session to ensure that the equipment use is clearly understood before providing certificates to the attendees.

Boltight also provide a detailed health and safety operating and instruction manual to support the use of the equipment. These manuals are available as hard copy or in an electronic format, and include graphical illustrations on product correct working practices and equipment maintenance.

- Work site training
- Theory and practical
- Classroom and work area
- 2 day course
- Up to 8 attendees
- Safety emphasis
- H&S Instruction Manual
